

On following the instructions it we assume that the user has already downloaded the JavaFX SDK and has already setup the environment. If not, follow the link and download the latest version for your device <https://gluonhq.com/products/javafx/> .

1. Open command prompt
2. Navigate to the src file of the project
3. Input: `javac App.java`
4. Input: `java App`

If that doesn't work, run it on IntelliJ. In order to setup the environment for jfx follow the following steps on this link: <https://www.jetbrains.com/help/idea/javafx.html> . After accomplishing that, follow same steps above.
